## Chromosomal Analysis: GTG Banding

| | |
|---|---|
| **Method Used** | **: 24/48 Hr Unstimulated culture** |
| **Specimen type** | **: Heparinized Bone Marrow** |
| **Banding Resolution** | **: 350-450 bphs** |

### Cytogenetic Profile

| | |
|---|---|
| Metaphases Counted | : 05 |
| Metaphases Analyzed | : 05 |
| Metaphases Karyotyped | : 03 |

### Karyotype

| | |
|---|---|
| Total Chromosome Number | : 46 |
| Autosomes | : 44 |
| Sex Chromosomes | : 2(XY) |

**Observation** : 46,XY[05]

### Interpretation

Low mitotic index seen, hence only 5 metaphases could be analyzed. There is no evidence of any structural or numerical abnormality in any of the metaphases studied. However, the possibility of low grade clonal rearrangements cannot be ruled out.

*Limitation: Low grade clonal rearrangements and/or the presence of submicroscopic or cryptic abnormalities may not be evident on conventional karyotyping.*
*Correlation of chromosomal study with clinical, hematological & molecular findings is recommended.*

*This test was performed at a facility outside Oncquest Laboratories Ltd*
